SUJET SERIES >>

A complete automation system designed from inception - to bring a high level of motorized rigging capability to your production with a familiar and easy to use user interface.

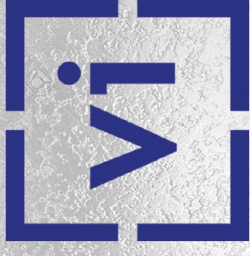

The system is comprised of either touchscreen or pushbutton controls with addressable drives, chain motors and winches and has the ability to be connected in both series and star topologies. Controls allow for jogging, targeted moves as well as cueing capabilities. All machines include redundant absolute encoders, limits and brakes and are designed for overhead lifting. A Sil3 safety system is standard for all axes with optional load sensing.

In addition to the standard Sujet product line, custom configurations are also available to meet the needs of any production.

VERENDUS INDUSTRIES >>

We are a full-service automation shop offering design, manufacturing and installation capabilities for both mechanical and electrical systems as well as software development. Additionally, we operate a UL 508a panel shop and can build listed panels to your existing plans or design custom panels to suit your requirements.

Our core industry experience is in entertainment rigging and automation and we understand the rigors of live productions and touring, as well as the frequent need for short lead-time design and manufacturing. We specialize in automation problem solving. If you have a complex project that needs a solution - we can help.
